

# Luttrell @ 3 km

SCEC CSM, v.0.1.5-made with GMT (twb@ig.utexas.edu)-12/28/16

**full stress tensor**, mean of van Mises stress:  $\langle \sigma_{VM} \rangle = 1.4e+01$  MPa

sticks: horizontal projection of most compressive eigenvector,  $e_3$ , length scaled

additionally with  $\sigma_{VM}$ , colors: normal strike-slip thrust

background shading: mean normal stress in the horizontal,  $\sigma_m^h = (\sigma_{xx} + \sigma_{yy})/2$
